## DYNAMIC AIR SHELTERS

### Industrial Uses

Wherever you need superior protection for workers in challenging and dangerous work environments or remote sites, Dynamic Air Shelters is the solution.

No ladders, cranes or lifting gear of any kind are needed to erect our shelters.

Our Lightweight Relocatable Shelters (LRS) are safe, efficient and effective for any job site; from small to very large industrial worksite protection. Our inflatable airbeam shelters are highly durable in design and proven blast-resistant. Dynamic Air Shelters (LRS) are used extensively from the Gulf Coast to the high Canadian Arctic in the oil and mining. Dynamic Air Shelters (LRS) are also being used in remote locations for mineral exploration, forestry and other industrial projects. Used in oil refineries as mess halls, temporary remedial warehouse storage or workshop and low humidity structures for resin curing on pipe.

### Advantages

Wide range of sizes and modular configurations that can include: Electrical, lighting, HVAC and air filtration systems.

- Manufactured to the highest standards and certified to meet the most stringent national fire codes. NFPA 701 in USA.
- Design can include blast & ballistic protection to a higher level threat
- Protective, functional shelters that allow work crews to remain on site during meal times and weather related job stoppages.
- Quickly and easily deployed by a small work crew, providing immediate, functional interior work space, storage space and living quarters.
- A low operating pressure allows shelters to be inflated quickly; some in as little as ninety seconds and up to 180 minutes for large industrial structures.
- Immediate protection from weather including; heavy rains, snow, high winds and hot or freezing temperatures. Certain models tested to category 3 hurricane compliance.

### Uses

Dynamic Air Shelters are used across a broad spectrum of industries, oil and gas, first response, military, expeditionary, mining and construction companies. All industries find many advantages using Dynamic Air Shelters' LRS.

Multiple Uses

Large Facilities

Warehousing

Accommodation

Conference Centre

Protecting Troops

Mess Halls

Sports Halls

Field Hospital

Aircraft Hangars

## DYNAMIC AIR SHELTERS

### Blast Resistant

Dynamic Air Shelters have been tested for blast resistance on military sites using 1,000 kg nitro methane blasts. The results have been surprising but impressive in reducing the effect of the shock to a level which allows survivability for the personnel as well as the structure. It is currently rated to a category 3 hurricane. With its simple but effective fragmentation walls it also keeps out the flying debris created by blast or explosive devices such as an RPG, 88mm, 105mm and 155mm shell as well as .762mm and 50 caliber rounds fired at 30metres.

### Excelling in the Field

Dynamic Air Shelters' approach to business is one of service with confidence. After fourteen years of research and development of our innovative LRS systems, we are in our element, providing shelters that are technologically advanced, reliable and above all, customer-oriented. No matter where your industrial development takes you and your employees, you can rely on Dynamic Air Shelters for the best in LRS.

### Dynamic Air Shelters: Made to Measure

Dynamic Air Shelters can be made to measure, our specially trained engineers design structures with varying sizes from 400 - 40,000 sq feet. Bespoke designs can be made; company logos, relief mission statements, military camouflage. Your choice; interior layouts; partitions, doors, HVAC, lighting, ventilation, furniture
